Half of the remaining marbles were picked up and taken by other people. You give one third of what is left to your friend, who helps you pick them up, which leaves you with 6. How many did you have before the split?

3. You and two friends, Micah and Aliya, have had numbers stuck to your foreheads. You are told that the sum of the three numbers is a square number, less than 100. Micah says the two numbers he can see also add to make a square number. Aliyah says the same. The numbers you can see do not – the sum is either four too little or 13 too big.

What numbers to you each have on your backs?
